Apixaban 2.5 mg and 5 mg Tablets

## INTRODUCTION

- ▶ Stroke occurs when the blood supply to part of the brain is interrupted due to the clot formation and prevent brain tissue from getting oxygen and nutrients.
- ▶ Stroke is a major health problem in community.
- ▶ According to WHO, annually, 15 million people worldwide suffer a stroke. Of these, 5 million die and another 5 million are left permanently disabled, placing a burden on family and community.

## KEY FEATURES

- ▶ It is found to be more effective for stroke prevention and systemic embolism.<sup>1</sup>
- ▶ Apixaban is appropriate alternative to Vitamin K Antagonist like warfarin for preventing stroke in patients with atrial fibrillation.<sup>2</sup>
- ▶ Apixaban has a better safety profile in comparison with warfarin, dabigatran and rivaroxaban.<sup>3</sup>
- ▶ The risk of major bleeding is significantly lower for apixaban compared with warfarin, dabigatran and rivaroxaban.<sup>3</sup>
- ▶ Compared to warfarin and rivaroxaban, apixaban has a much lower risk of intracranial haemorrhage.<sup>4</sup>

## Association of Rivaroxaban vs Apixaban With Major Ischemic or Hemorrhagic Events in Patients With Atrial Fibrillation

**Objective :** To compare major ischemic and hemorrhagic outcomes in patients with atrial fibrillation treated with rivaroxaban or apixaban.

**Result :** The adjusted incidence of major ischemic or hemorrhagic events was 16.1 per 1000 person-years for rivaroxaban vs 13.4 per 1000 person-years for apixaban, a difference that was statistically significant.

Primary Outcome in a Study of the Association of Rivaroxaban vs Apixaban With Major Ischemic or Hemorrhagic Events in Atrial Fibrillation.

**Conclusion :** Among Medicare beneficiaries 65 years or older with atrial fibrillation, treatment with rivaroxaban compared with apixaban is associated with a significantly increased risk of major ischemic or hemorrhagic events.

# Faxapix

Apixaban 2.5 mg and 5 mg Tablets

## DESCRIPTION

Faxapix contain Apixaban available in the strength of 2.5 mg and 5 mg Tablets. It is an anticoagulant (blood thinner) class of medication.

## MECHANISM OF ACTION

Apixaban is an orally available Factor Xa inhibitor. Apixaban inhibits free and clot-bound FXa and prothrombinase activity. By inhibiting FXa, apixaban decreases thrombin generation and thrombus development.<sup>1</sup> Thrombin acts on fibrinogen to form fibrin, thereby forming a stable clot. Apixaban is a highly selective direct factor Xa inhibitor, blocking the propagation phase of the coagulation cascade.<sup>2</sup>

## INDICATIONS

Prevention of stroke and Systemic embolism in atrial fibrillation patients.

## DOSAGE

- ▶ The recommended dose of Faxapix is 5 mg orally bid.
- ▶ If patients fulfilling at least two (2) of the following criteria, age  $\geq$  80 years, body weight  $\leq$  60 kg, or serum creatinine  $\geq$  133 micromole/L (1.5 mg/dL), a reduced dose of Faxapix 2.5 mg twice daily is recommended.

## PRESENTATION

Available as a strip of 10 tablets.

## STORAGE

Store protected from light and moisture at a temperature not exceeding 30°C.
