- ✓ **DAPAHENZ-S 5/50, 5/100**: is a film coated tablet contains Dapagliflozin 5 mg and Sitagliptin 50/100 mg.

INDICATION:

- ✓ As an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

MECHANISM OF ACTION:

Dapagliflozin:

- ✓ By inhibiting SGLT2, Dapagliflozin blocks reabsorption of filtered glucose in the kidney, increasing urinary glucose excretion and reducing blood glucose levels.
- ✓ This excretion allows for better glycemic control and potentially weight loss in patients with type 2 diabetes mellitus

Sitagliptin:

- ✓ Sitagliptin prolongs the action of GLP-1 and GIP.
- ✓ By enhancing active incretin levels, sitagliptin increases insulin production and lowers glucagon secretion from alpha cells, which decreases hepatic glucose overproduction.

- ✓ **DAPAHENZ-S 5/50**: 1-2 Tablets daily or as prescribed by the doctor.
