## TOLMOVE-D

Tolperisone 150 mg & Diclofenac 50 mg Tablets

## TOLMOVE

Tolperisone 150 mg Tablets & 450 mg Sustained Release Tablets

### Description :

Tolmove contains tolperisone available in the strength of 150 mg film coated and 450 mg sustained release film coated tablet. **Tolmove-D** contains tolperisone 150 mg in combination with diclofenac 50 mg tablets.

### Mechanism of action:

**Being centrally acting muscle relaxant, Tolperisone** acts at the level of spinal cord by blocking sodium channels and calcium channels. Tolperisone exerts its spinal reflex inhibitory action predominantly via a pre synaptic inhibition of the transmitter release from the primary afferent endings via a combined action on voltage-gated sodium and calcium channels.

**Diclofenac** inhibits cyclooxygenase-1 and -2, the enzymes responsible for production of prostaglandin (PG) G<sub>2</sub> which is the precursor to other PGs. These molecules have broad activity in pain and inflammation and the inhibition of PG production.

### Indication:

For the treatment of patients with acute muscle/musculoskeletal spasm in adult.

### Dosage:

As directed by the physician.

### Storage:

Store at a temperature not exceeding 25°C, protected from light and moisture.

### Presentation:

Available as a strip of 10 tablets.
