

For the Management of Uncontrolled Hypertension

TELMODOR- 40

Telmisartan 40 mg Tablets

TELMODOR- 80

Telmisartan 80 mg Tablets

Timeless

Elegance

Background :

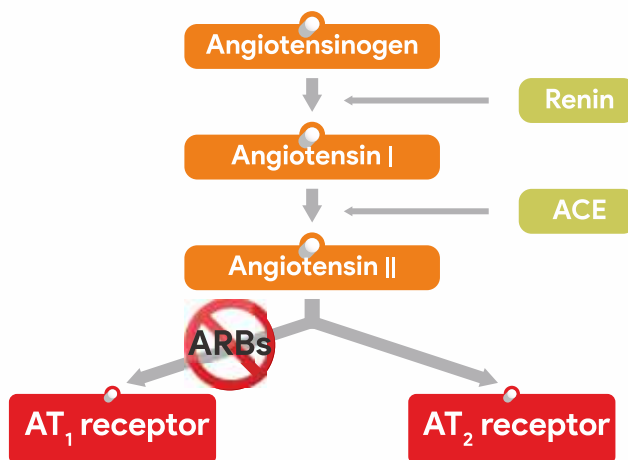

Guidelines like JNC 8, ACC, ESC and IGH-IV describes management of hypertension. In line with these guidelines, multiple observational studies have reported the use of ARBs as first-line therapy both as monotherapy and in combination with other antihypertensive drugs (AHDs) for the management of essential hypertension and Telmisartan is the most preferred among ARBs. Very high lipophilicity, a unique feature of Telmisartan, coupled with a high volume of distribution, indicate that the compound offers the clinically important advantage of good tissue penetration.

Indication :

- **Telmodor** is indicated for the treatment of Hypertension.

Mechanism of Action :

- **Telmisartan** blocks the vasoconstrictor and aldosterone-secreting effects of angiotensin II by selectively blocking the binding of angiotensin II to the AT₁ receptor in many tissues, such as vascular smooth muscle and the adrenal gland. As a result, Telmisartan relaxes the blood vessels.

Dosage & Administration:

- **Telmodor:** The usual recommended dose of **Telmodor** is 40 mg once a day. In case blood pressure target is not achieved, Telmisartan dose can be increased to maximum of 80 mg once daily.

USP:

- Long Half-Life (~ 24 hour)
- Long Duration of Action
- Effective 24 Hours Blood Pressure Reduction
- Cardiovascular protective effects with better tolerability
- Effective in reducing the progression of metabolic syndrome
