HARMONY

VOGLIGRESS

Voglibose 0.2 and 0.3 mg Tablets

VOGLIGRESS-M

Voglibose 0.2/0.3 mg + Metformin (SR) 500 mg Tablets

DESCRIPTION:

- **Vogligress -0.2/0.3** contains Voglibose 0.2 mg and 0.3 mg respectively.
- **Vogligress-M-0.2/0.3** is combination of Voglibose 0.2/0.3 mg with Metformin (As Sustained Release) 500 mg.
- The combination of voglibose and metformin hydrochloride complement each other and provide better glycaemic control in management of type 2 diabetes and may help prevent its associated macrovascular and microvascular complications.

INDICATION:

For the treatment of diabetes. It is specifically used for lowering post-prandial blood glucose levels thereby reducing the risk of macrovascular complications.

MECHANISM OF ACTION:

➤ **Voglibose:**

Voglibose is an alpha-glucosidase inhibitor which reduces intestinal absorption of starch, dextrin, and disaccharides by inhibiting the action of alpha-glucosidase in the intestinal brush border. Inhibition of this enzyme halts the decomposition of disaccharides into monosaccharides and slows the digestion and absorption of carbohydrates thus reducing post prandial blood sugar level.

➤ **Metformin:**

- Metformin is a biguanide with antihyperglycemic effects:
- Metformin may act via 3 mechanisms:
 1. By reducing hepatic glucose production through inhibition of gluconeogenesis and glycogenolysis.
 2. By increasing insulin sensitivity in muscle, improving peripheral glucose uptake and utilization.
 3. By delaying intestinal glucose absorption.

DOSAGE:

- **Vogligress -0.2/0.3:** 1 Tablet 3 times a day orally before each meal.
- **Vogligress-M-0.2/0.3:** 1 Tablet twice or thrice a day orally before meal.
